Chung-Yen (Matt) Chiang

M.S. Student, Computer Science and Engineering, Seoul National University

cymattchiang@gmail.com | cymattchiang.github.io | github.com/cymattchiang

Research Interests

Network systems and architecture, with an emphasis on efficient and reliable networked systems.

Education

Seoul National University 2026 – Present
M.S. in Computer Science and Engineering
Advisor: Prof. KyoungSoo Park | Expected graduation: 2028

National Taiwan University of Science and Technology 2019 – 2023
B.B.A. in Information Management
GPA: 4.01 / 4.30

Publications

[C1] **Chung-Yen Chiang** and Nai-Wei Lo. "Secure Channels for Smart Manufacturing Systems in Cloud Environments." In *Proceedings of the Cryptology and Information Security Conference (CISC)*, Taiwan, 2022.

[PDF, Chinese] [Summary, English] [Repository]

Research Experience

T-Networking Laboratory, Seoul National University Sep 2026 – Present
Graduate Researcher
Advisor: Prof. KyoungSoo Park

- Research interests in network systems and architecture.

Institute of Information Science, Academia Sinica Jul – Aug 2022
Summer Research Intern
Advisor: Meng Chang Chen

- Worked on security systems and malware analysis, contributing to a sandbox-based analysis framework in C and Python.

National Taiwan University of Science and Technology Jul 2021 – Feb 2022
Undergraduate Researcher
Advisor: Prof. Nai-Wei Lo

- Studied secure connectivity between industrial systems and cloud infrastructure; published a first-author conference paper at CISC 2022 (Taiwan).

Teaching Experience

System Programming Fall 2026
Teaching Assistant
Computer Science and Engineering, Seoul National University

- Lead lab sessions, answer student questions, hold TA office hours, and grade exams.

Cybersecurity and AI-based Analytics Fall 2022
Teaching Assistant
Department of Electrical Engineering, NTUST

- Supported office hours, grading, hands-on lab exercises, and final projects.

Industry Experience

Amazon | Connectivity Team Apr – Jun 2026
Software Development Engineer II

- Improved embedded wireless performance, achieving **2.36× Wi-Fi throughput** (10.59 to 25 Mbps).
- Supported firmware deployment across multiple device variants and regions from a unified image.

Amazon | Connectivity Team Aug 2023 – Mar 2026
Software Development Engineer I

- Reduced IoT reconnection latency by **76%** and streaming p99 latency by **24%**.
- Improved wireless power efficiency, extending device standby from **40 to 65 days**.
- Built secure BLE provisioning for deployment across device variants.

Amazon | Connectivity Team Sep 2022 – Jul 2023
Software Development Engineer Intern

- Developed automation to support device interoperability across **60+ commercial Wi-Fi routers**.

Honors & Awards

MOST Undergraduate Research Scholarship 2021
Ministry of Science and Technology, Taiwan

Academic Excellence Award 2021 – 2022
NTUST; top 2 of class for three consecutive semesters

Technical Background

Systems	Embedded systems, wireless networking, operating systems, firmware integration
Programming	C, C++, Python, Shell
Tools	Linux, GDB / JTAG, Git
Languages	Mandarin (native), English (professional)
